*WCHD case counts refer to Winnebago County Health Department jurisdiction, which excludes the portions of the [City of Menasha](#) and [City of Appleton](#) that fall within Winnebago County.

Spotlight: Locally Acquired Malaria Cases Identified in US

- There has been identification of locally acquired malaria cases (*P. vivax*) in two U.S. states ([Florida](#) [4] and [Texas](#) [1]) within the last 2 months.
- Consider the diagnosis of malaria in any person with a fever of unknown origin, particularly if they have been to the areas with recent locally acquired malaria. Consider malaria in a symptomatic person who traveled to an [area with malaria](#) in the weeks/months preceding symptom onset.
- Please refer to [CDC's Malaria Diagnosis and Treatment Guidelines for U.S. Clinicians](#) for specific detailed instructions. An algorithm for diagnosis and treatment of malaria is available [here](#).

Spotlight: Multinational Fungal Meningitis Outbreak

- There has been [a multinational outbreak of fungal meningitis](#) among patients who had procedures under epidural anesthesia in Matamoros, Tamaulipas, Mexico from January 1 through May 13, 2023.
- The two clinics associated with the outbreak (**River Side Surgical Center** and **Clinica K-3**) have been since closed May 13, 2023, but it can take weeks or months for symptoms to start.
- **Healthcare providers** should perform the diagnostic assessments listed in [the recommendations document](#) on all patients with potential exposure, **even if they do not have symptoms**.
- Healthcare providers should immediately report suspected fungal meningitis cases to their local health department.

Spotlight: COVID-19

- The COVID-19 vaccine is available at the County Administration Building (112 Otter Ave, Oshkosh) by appointment between 8am and 4pm on Tuesdays.

Reportable Diseases

A selection of common reportable disease are showcased to the left; more extensive lists can be found in the [full-length report](#).
